

## **B.Sc Maths**

The lab equipments required are computers with appropriate software and with good internet connectivity and LCD projectors. But many of the colleges with BSc Mathematics course lack Mathematics labs with sufficient computers and internet connectivity. So necessary steps may be taken to set up Mathematics Labs in every college with sufficient number of computers (at least one computer for every two students) with good internet connectivity and with LCD projectors. Also, as it is difficult to handle the computer practical classes with more than 40 or 50 or more students by a single teacher, it is decided in the meeting to request for sanctioning additional teacher/teachers as per the student teacher ratio for the purpose practical classes for the smooth conduct of computer practical classes for both Mathematics and Statistics.
